Bob Mayer

Air France Flight 447: Human-Machine Interface Failure (Anatomy of Catastrophe Book 15) Bob Mayer

Last warning from the flight computer: “Pull up.”

Co-pilot yells: “We’re going to crash. I don’t believe it. But what’s happening?”

Seconds later one of the co-pilots exclaims “F&ck! We’re dead.”

You might not want to fly again after reading this.

Every man-made disaster and catastrophe has at least six Cascade Events leading up to the final event, the catastrophe according to the Rule of Seven. On Flight 447, the events leading up to the crash are stunning—and all avoidable.

This is a quick read of the Cascade Events that led up to the crash of Air France Flight 447.

A perfectly functioning Airbus 330 flying above 30,000 feet went from normal flight to impact with the ocean in four minutes and twenty-three seconds in a frightening cascade of events. This catastrophe highlights the danger of the human-machine interface, where mistakes were made, leading to the deaths of all on board.

Bob examines the Rule of Seven, and how human error plays a role in many catastrophes. Nothing happens in isolation or as a result of a single event. Thus, by learning from history, we can gain insight into preventing a similar catastrophe in the future.

This is one of many catastrophes that Bob Mayer, former Green Beret, West Point Graduate and NY Times Bestselling Author, examines in his series of shorts: The Anatomy of a Catastrophe.
