Make the right decisions when it comes to pest control in agriculture!

Bacillus thuringiensis: A Cornerstone of Modern Agriculture explores the impact that one of the most prominent biologically based pesticides has had on pest control technology—and the issues that surround its use. The book examines the development, use, and management of technologies derived from *Bacillus thuringiensis* (*Bt*), addressing the health, economic, environmental, and social concerns generated by the deployment of genetically engineered crops. Authors representing a diverse cross section of the international scientific community contribute review articles and research findings that address the use of *Bt* in microbial formulations and transgenic crops, technological advances in the genetic engineering of plants, advances in methodologies, and improved agricultural practices and productivity through the use of *Bt* cotton.

Bacillus thuringiensis: A Cornerstone of Modern Agriculture examines the vital issues surrounding this Gram-positive bacterium. Contributors from academia, government, and industry address the safety of *Bt* for human consumption, its effects on non-target organisms, the role of microbial *Bt* products in crop production in the United States, and the utility and management of transgenic plants. The book also explores:

- engineering *Bt* transgenic rice for insect pest protection
- the *Bt* potato in developing countries
- *Bt* expression in sugarcane and cauliflower
- a comparative analysis of *Bt* cotton in Argentina
- the ecological impact, gene expression, and current resistance management requirements of *Bt* cotton in the United States
- and much more!

Bacillus thuringiensis: A Cornerstone of Modern Agriculture is an essential resource for advanced students and technical specialists working in agriculture, biotechnology, entomology, pest management, and crop sciences. Stakeholders will also find it invaluable in regulatory decision making about genetically engineered crops, pesticide use, and crop protection.
