An introduction to scientific computing for differential equations

Introduction to Computation and Modeling for Differential Equations provides a unified and integrated view of numerical analysis, mathematical modeling in applications, and programming to solve differential equations, which is essential in problem-solving across many disciplines, such as engineering, physics, and economics. This book successfully introduces readers to the subject through a unique "Five-M" approach: Modeling, Mathematics, Methods, MATLAB, and Multiphysics. This approach facilitates a thorough understanding of how models are created and preprocessed mathematically with scaling, classification, and approximation, and it also illustrates how a problem is solved numerically using the appropriate mathematical methods.

The book's approach of solving a problem with mathematical, numerical, and programming tools is unique and covers a wide array of topics, from mathematical modeling to implementing a working computer program. The author utilizes the principles and applications of scientific computing to solve problems involving:

- Ordinary differential equations
- Numerical methods for Initial Value Problems (IVPs)
- Numerical methods for Boundary Value Problems (BVPs)
- Partial Differential Equations (PDEs)
- Numerical methods for parabolic, elliptic, and hyperbolic PDEs
- Mathematical modeling with differential equations
- Numerical solution
- Finite difference and finite element methods

Real-world examples from scientific and engineering applications including mechanics, fluid dynamics, solid mechanics, chemical engineering, electromagnetic field theory, and control theory are solved through the use of MATLAB and the interactive scientific computing program Comsol Multiphysics. Numerous illustrations aid in the visualization of the solutions, and a related Web site features demonstrations, solutions to problems, MATLAB programs, and additional data.

Introduction to Computation and Modeling for Differential Equations is an ideal text for courses in differential equations, ordinary differential equations, partial differential equations, and numerical methods at the upper-undergraduate and graduate levels. The book also serves as a valuable reference for researchers and practitioners in the fields of mathematics, engineering, and computer science who would like to refresh and revive their knowledge of the mathematical and numerical aspects as well as the applications of scientific computation.

From reader reviews:

Serafina Hayes:

Within other case, little people like to read book Introduction to Computation and Modeling for Differential Equations. You can choose the best book if you'd prefer reading a book. So long as we know about how is important the book Introduction to Computation and Modeling for Differential Equations. You can add expertise and of course you can around the world by a book. Absolutely right, mainly because from book you can learn everything! From your country until eventually foreign or abroad you will find yourself known. About simple factor until wonderful thing you could know that. In this era, we can easily open a book or even searching by internet gadget. It is called e-book. You should use it when you feel fed up to go to the library. Let's read.

Gary Sandler:

Here thing why this kind of Introduction to Computation and Modeling for Differential Equations are different and trusted to be yours. First of all studying a book is good nonetheless it depends in the content of computer which is the content is as delightful as food or not. Introduction to Computation and Modeling for Differential Equations giving you information deeper and in different ways, you can find any guide out there but there is no guide that similar with Introduction to Computation and Modeling for Differential Equations. It gives you thrill reading through journey, its open up your current eyes about the thing that happened in the world which is perhaps can be happened around you. You can bring everywhere like in recreation area, café, or even in your technique home by train. In case you are having difficulties in bringing the printed book maybe the form of Introduction to Computation and Modeling for Differential Equations in e-book can be your substitute.

Judith Lucas:

Information is provisions for individuals to get better life, information today can get by anyone in everywhere. The information can be a understanding or any news even a huge concern. What people must be consider whenever those information which is in the former life are challenging to be find than now is taking seriously which one would work to believe or which one the particular resource are convinced. If you find the unstable resource then you understand it as your main information you will see huge disadvantage for you. All of those possibilities will not happen with you if you take Introduction to Computation and Modeling for Differential Equations as your daily resource information.

Herbert Mikula:

People live in this new time of lifestyle always make an effort to and must have the time or they will get great deal of stress from both way of life and work. So , when we ask do people have extra time, we will say absolutely indeed. People is human not really a huge robot. Then we question again, what kind of activity do you have when the spare time coming to you actually of course your answer will unlimited right. Then do

you try this one, reading publications. It can be your alternative with spending your spare time, the book you have read is definitely Introduction to Computation and Modeling for Differential Equations.
