The Unselfish Genome- How Darwin & Dawkins Missed The 2nd Half Of The Theory Of Evolution: New Research Identifies The Hormone Changes That Control Human Aging Jeff T. Bowles

Fun To Read!- Written in an easy to understand and at times humorous style for normal readers and scientists alike.

MANY Shocking Conclusions about the Freak Show of Evolution's Unexplained Oddities

One chapter includes a detailed examination of how various human hormones change with aging, and how the "good" hormones decline with age, and how the "bad" hormones intentionally designed by evolution to kill you, skyrocket after age 50. (also included are ways to reverse this process).

This book has it ALL!

Chock Full of Jaw-Dropping and Thought-Provoking Photos,

this is a groundbreaking new look at and explanation of the mysteries of evolution that have been plaguing mainstream science since the first publication of Darwin's theory of evolution.

Sex and aging have never had any satisfactory explanation within the Selfish Gene paradigm begun by Darwin and his disciples, and popularized by Dawkins in his famous book-"The Selfish Gene".

Aging and Sex are conclusively shown to be evolution's evolved defenses to evolving predation, and in the absence of predation, they will eventually become undone-leading to a strange and bizarre world where humans eventually will evolve immortal lifespans, and become 100% female who reproduce solely through parthenogenesis (female self-cloning)!

As bizarre as it sounds, examples of many types of animals where this type of reproduction already occurs are provided. Including animals as complicated as turkeys, sharks, and lizards!

Homosexuality, usually ignored by evolutionary biologists, is examined and shown to also be a defense against evolving predation that acts as birth control for what evolution perceives as less fit (predator-stressed) mothers.

Even human religion as an evolved defense to famine and drought is explored and explained with a special emphasis on the high rate of religious suicide associated with various religions and cults.

Sex and Aging are examined and shown to be a species-selected defense to evolving predation that is being selected for at the local ecosystem level virtually everywhere and all the time.
